I have not trouble you ith these many and persisting departures from what is, I think, medically proper andessential but these many untoward incidents, the most recent so pained that I could not control my legs and arms in their spasms that were fater than I can direct them to move. I do not take the time now for any fuller expanation beut it defiew the offs to treat each of these wrongul events as no more the ethan a mere concidence. They were triggered by apparent greed of the Gaerl

healthcare Mystem (ugh) when it soughe to reduce the burden on each employee rathher thw hire more employees. One of you has informed me that Gambro, of Swedish perership Weems intent on a campaigh to Control armuch as it can of kidney dialsisi intin the Us,

Cambro, visible, logued up on for the Lipper arm implants for the dialysis and I can think of no other Cause for the louding up of the other. Each required me to spend file days at the offis copkins & hospital in Baltimre. The inserts were praised highly by all who examined them locally. Cost Medicase 10 dips plus the surgery

In at least the second losuing up, which a Cambro minor official observed because he was cameriate called to correct if, he did not even try to do that. It then seemed that the tethi technician, for the second time, had inserted the hollow needle in the wrongsplace biminating the usefulnes s of that superior surgery that all raved bea shout 4

by the lord's who saw them. That technician had removed the hollow needles after the had inserted hepwrin, an anti-coagular that sually law far eight hours Gambro would no let me go home although the hours farly, with three weeks of two hap arms faily for at least three weeks so I knew there was no danger at home. But apparently Gambro feared a law suit and it got an order from the Johnson to hospitalise me sa had not been neressary those three reviews weeks when the heparin did not bleed those to thimes in I was home with bleed care established by would not let me drive to te hospital, less than a mile away, would not dribe me there, would not let me drive with one of them with me to assure safety. All they cared about was getting closed up and getting home. Medicare does

not pay for local hospital bigls so I got stuck with it. For the rest of these gross Gambro negligence, which was the remmoval of the hollow needles before the hepgrin was injected- which means the guarateed anticoagulation of the eight-hour heparin or the assured continued bleeding Auntil the heparin was exhausted, Gambro had waxx me in the hopp tal. To cover its ass, rather than to protect me. From the record I needed no protection. But in confining me in the hospital I have to leave Lil alone when that is not safe for her. And I did worry about that all the time I was hospitalized when there was no gelitimate need for that.

Cost Medicare about a thousand. That on might, he would wary

Cost Gembro & nothing for its gross neglingence.

I think it fired that technician. - dl not recall seeing her since then.

What has caused this sharpest pain I canrecall was not of any possible medical need or purpose. It sole usefulness was in what can be interpreted as a continuous campaign to teach me a less of what they can do to any upstart thet wants them to live within the law and regulations and not to repredicare as an anyone else off.

I have been making records since it became apparent that no legitimate medical purpose was served by these abuses and endangerous of me and what may irretate this billionsire multinational greed merchant is that in each and every instance of these abuses, one way or another have I prevailed.

I think I have addedute records on them and when I can I'll try to putthem in chronoligical order. If anyone wants them after that is done I'll provide copies. This is to let you know.

I understand is permanent, had not been reached when without consulting me, Dr. Johnson got me itstarted in it when I was in the local hospital—just after he had observed an unprovement in that told him not t continue to see me monthly but to make it every three months. Aside from these events that are not mere connected and should not have happened in any event, I can see no improvement in the way Ifeel, and I feel less good that before the dealysis, but it is without question that whether or not normal, and the Gambro has not addressed this in any way, from the dialysis I grow steadily more unsteady on my feet and ever so much weeker, with this pronounced shift by after I am home. No problem sitting at my ideak or in riving but for some weeks I have not left home the dialysis day once I am home and most I had to take a nap.

I am also distrurbed that ather than from an infrequent Ga, bro nirse or technician, I get no explanations and no rational just ifications.

Ga bro pretends these untowrd events are merely coincidence, as some may perhaps be, but the endless succession of them and this last, this really painful abuse, was not accidental and was not any kind of coincidence. There than my refusig again to be intimindated into accreting what is improper wrong and potentially dangerouse to me

I have no reason to believe or even to duspevit that there can be some kind of federal involve ent in all of this but of the narrow Cambro interest only some federal interest can be suspected.
